Powering Better Business Decisions

# PS Financials Advanced Analytics with Power BI

Power BI allows you to transform your company's data into rich visuals, so that you can focus on what matters to you and gain valuable insights that might otherwise not be apparent.

When you combine the supreme flexibility of PS Financials multi-level analysis and our PSF Data Cube with Power BI you have the perfect blend of complexity and simplicity to begin your journey to a deeper understanding of your business

With Power BI you can easily deploy a cloud-based BI environment for users to share insights, collaborate and access reports from anywhere on any device.

Bring multiple data sources together as one within the PSF Data Warehouse where your accounting system sits at the heart of your enterprise wide BI Analytics solution.

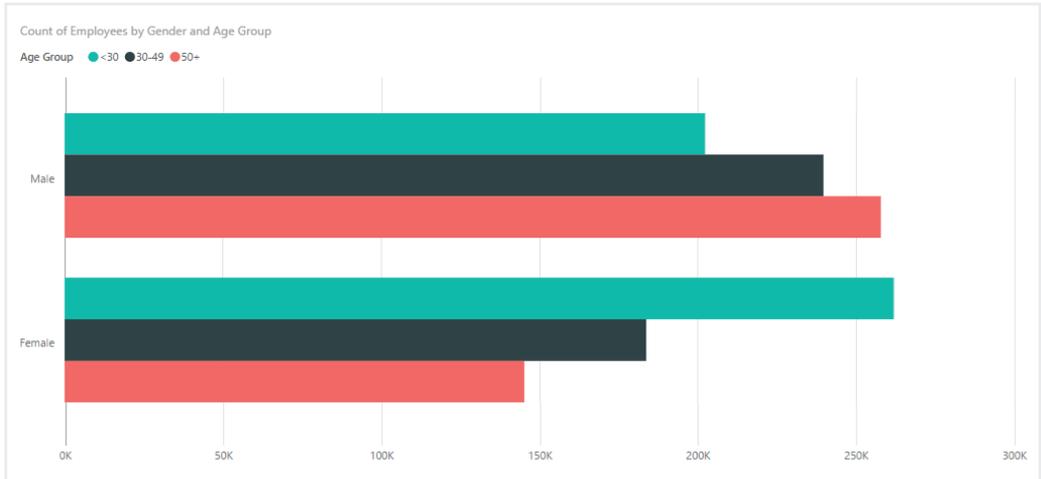

Our BI Semantic layer removes the need for in-depth knowledge of the PSF database schema, allowing you to focus on facts and presentation.

Discover, analyse and visualise your data like never before to gain valuable business insights and share findings with colleagues.

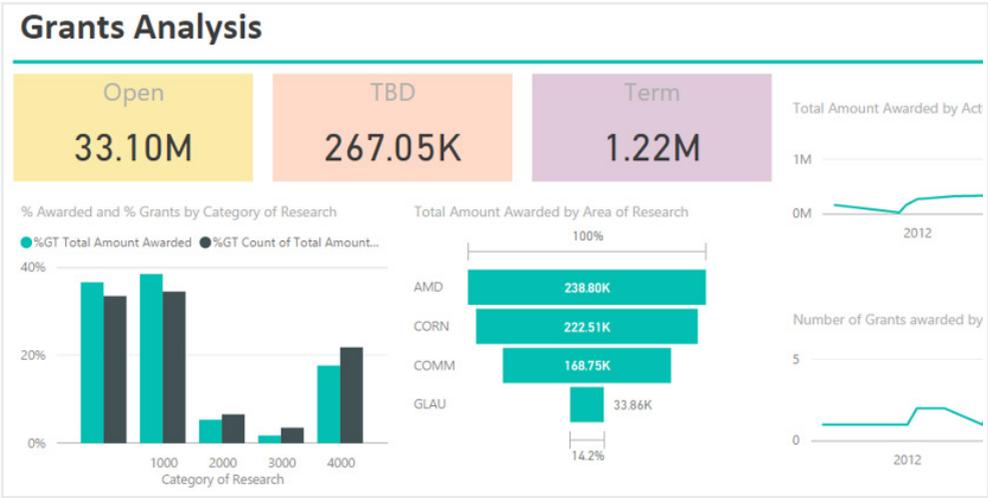

Our standard reporting pack has been transformed and enhanced for Power BI.

## Q&A

Power BI enables business users to interact with their data in natural language. The natural language query capability allows users to ask questions of their corporate data and get instant and visual results. Q&A interprets the semantics of the question the user is asking and serves up the correct interactive chart or graph. It's as easy as going to a colleague to ask a question.

# Grants Analysis

## A powerful new way to work with data

Gain valuable insights using PS Financials with Power BI
